

FacilityOps

The AI watches and logs. Your team stays in control. One audit-ready record of attendance, gate access, visitors and patrols — off the cameras you already own.

One record across four operations

Attendance logging

Vision presence-detection clocks staff in/out into an auditable record. Your team reviews & approves — it supports payroll, doesn't run it.

Gate & parking

License plates logged at the gate — entries, exits, occupancy, overstay — as alerts and an exportable trail.

Visitor access

Pre-register visitors by name/plate; arrivals flagged, searchable entry log for the front desk.

Patrol verification

Guard rounds confirmed on a timestamped trail — proof a patrol happened, on the record.

Live in about a week, on what you already run

01

Camera survey

Confirm feeds & gate angle; reposition one camera if needed for clean plate reads.

02

Enroll & configure

Staff, plates, zones, shifts — with consent & retention set your way.

03

Dashboard & reports

Daily records + alerts to the manager, every event timestamped & exportable.

Built so people stay accountable

Human in the loop — the system logs; your people review and decide. No pay/access/discipline decision is automated.

Your infrastructure — runs on the cameras & network you own; footage stays on-site.

PDPL-aligned by design — consent, notice, retention & data residency configured and owned by you.

Audit-ready records — a clean, exportable trail for HR, security and operations.
